

## ***EXTENDED DISPLAY PROTOCOL***

1. The presentation is a demonstration on how an image was taken from capture to final print, with all steps included. Plan to “talk out loud” about what edits you are doing and why you’re making them.
2. The presentation needs to be displayed on the screen using the projector. The presenter must bring a computer with the necessary software installed. It is recommended that you come early to make sure that your computer will display properly with the projector.
3. The demonstration will be made during the meeting. The presentation should be limited to 15 to 20 minutes. The presentation needs to be well practiced.
4. Remember this is a demonstration of a technique used on a single image; this is not the forum for a slide show presentation.
5. The moderator reserves the right to interrupt, or stop, the presentation should it begin to drift off the subject.
